

Application No.: 10/692,757Docket No.: 300200051-2**AMENDMENTS TO THE SPECIFICATION**

Please amend the following paragraphs:

Page 10, lines 1-5:

As indicated above, the display screen 25, the keyboard ~~[[23]]~~ 33 and the disk drive 37 together comprise a computer workstation. Although the computer workstation is physically provided on the passenger seat 5 shown in Figures 2a and 2b, the passenger using the computer workstation will actually be seated in the seat directly behind the passenger seat shown.

Page 14, lines 1-7:

In both the first and second embodiments, a further level of security can also be provided if the or each data file is encrypted at the PC check-in terminal 13. Encryption can be performed using a conventional encryption algorithm so that the data file is converted to a different format. ~~[[The]]~~ In the event a file is positively identified as being an encrypted data file, the file is thereafter accessed by means of identifying the required decryption 'key' which causes the encrypted data file to be converted back to its original format. The 'key' can be in the form of a password, the principle of which is described above.
